

Developed by Active Points for the Garmin Health APIs, the Watch us get fit School PE application pairs Vivokis with the Vivo hub 2 wireless access client to track and display kids real time activity during School hours. Now being rolled out in an exclusive partnership with the Jamie Carragher watch us get fit programme, schools can finally ditch the paper work and introduce tech into PE and Sports activity.

Data can be viewed for an individual student, or as an aggregate by class/ all classes and is displayed across multiple dynamic dashboards in real time. Further data analysis is available as an add on module.

The Application tracks daily steps, minutes active, calories burned and intensity. School administrators can add a class, student and permanently allocate a Vivoki to a student for the academic year. Students wear the Vivoki throughout the School day, leaving them on School premises overnight.

The programme also delivers incentives in the form of points and Activcoins. Students collect points based on their activity and can trade the points to download money off vouchers for their families to use with local and national brands, including days out. Schools can collect and spend Activcoins on essential items such as PE equipment, stationery, school trips and other school purchases in the Active Points school zone.

Case study

The Watch us get fit programme is already yielding positive outcomes after a recent trial.

Results show a 58% increase in steps and 100% participation in school P.E over a 12-week period! The case study shows pupils were more active throughout the day leading to a healthier lifestyle, also having a positive psychological effect on behaviour in class room sessions.
